Art Unit: 1793

***Allowable Subject Matter***

1. Claims 1, 4 to 15, 17, 20 and 22 to 29 are allowed.
2. The following is an examiner's statement of reasons for allowance:
3. A case hardened gear which is made from a defined steel material composition containing dispersed cementite ((Fe, Cr)<sub>3</sub>C), wherein an average Cr concentration in said cementite is 2.5 to 10 wt%, and said gear having a case-hardened rolling contact surface layer being formed by induction hardening from a temperature equal to or lower than the A<sub>1</sub> temperature to a quenching temperature of 900 to 1100°C followed by subsequent cooling and tempering at a low temperature of 100 to 300°C such that case-hardened rolling contact surface layer has martensite parent phase containing 0.25 to 0.8 wt% solid-dissolved carbon and dispersed with 2 to 18 vol.% cementite containing solid-dissolved Cr that is substantially granulated with an average particle diameter of 0.1 to 1.5 µm and its method of making as recited by claims 1, 4 to 15, 17, 20 and 22 to 29, is not taught or suggested by the art of record.
4. Present invention patentably defines over European patent 0950723 ("EP-723). As submitted by Applicants, EP-723 does not teach a case hardened gear made from a steel material containing cementite ((Fe, Cr)<sub>3</sub>C) dispersed, wherein an average Cr concentration in said cementite is 2.5 to 10 wt% and having a case hardened martensitic layer containing 0.25 to 0.8 wt% solid-dissolved carbon and dispersed with 2 to 18 vol.% cementite containing solid-dissolved Cr that is substantially granulated with an average particle diameter of 0.1 to 1.5 µm as recited by the claims; and such property limitations would not be expected since process of making is different.

Art Unit: 1793

5. The present invention method requires the steps of Cr concentration heat treatment, an induction hardening treatment, cooling and tempering. In contrast, EP-723 in paragraphs [0043] and [0047] discloses carburization, carburization/carbonitriding and/or carbonitriding treatment, quenching at A1-point temperature or less to form martensite, pearlite or bainite then reheating to  $\geq$  A1 point temperature to disperse and precipitate granulated cementite and refine crystal grains while carbon and/or nitrogen is diffusely permeated in a carburization/carbonitriding or carbonitriding atmosphere.

***Terminal Disclaimer***

6. The terminal disclaimer filed on August 26, 2009 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of any patent granted on commonly owned pending reference application Serial No. 10/984,833 filed on November 10, 2004 has been reviewed and is accepted. The terminal disclaimer has been recorded.

7. The terminal disclaimer filed on May 14, 2008 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of any patent granted on commonly owned pending reference application Serial No. 10/790,959 has been reviewed and is accepted. The terminal disclaimer has been recorded.

8. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 1793

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
